1. Introduction

EGPICS is a platform designed to connect photographers and videographers, primarily focusing on showcasing the beauty of Egypt. The platform allows users to share their work, engage with a creative community, and explore a diverse range of media through likes, comments, and direct uploads.

EGPICS caters to both general users (artists, photographers) and administrators who manage content and ensure community standards. Its mission is to foster creativity, respect, and collaboration among users.

2. System Analysis and Design

System Analysis

- **User Roles:** Users (photographers/videographers) and Admins.
- **Core Features:**
 - User registration and authentication via Breeze.
 - Media uploads (photos/videos), tagging, and categorization.
 - User engagement through likes and comments.
 - Admin management of users and content (edit, delete, activate/deactivate).
- **Non-Functional Requirements:**
 - **Security:** Password hashing, rate limiting for login attempts.
 - **Scalability:** Ability to handle growing numbers of uploads and users.
 - **Performance:** Efficient handling of large files and simultaneous uploads.
 - **Usability:** Simple, user-friendly interface with a responsive design.

System Design

- **Frontend:** Built using a responsive framework (like Bootstrap) for seamless access across devices.
- **Backend:** Laravel framework with Breeze for secure authentication.
- **Database:** Relational structure storing user, media, engagement (likes/comments), categories, and slug data.

3. Installation Guide

To set up the EGPICS project locally:

1. **Install XAMPP** with PHP 8.2 and start Apache and MySQL.
2. **Edit the php.ini file** to allow larger file uploads by adjusting upload_max_filesize and post_max_size to 500MB.
3. **Install Composer** to manage project dependencies.
4. **Clone the GitHub repository** into the htdocs folder of XAMPP.
5. **Require FFMPEG library** via composer and make sure library exists on your local machine, you can follow the steps here <https://www.geeksforgeeks.org/how-to-install-ffmpeg-on-windows/>
6. Run all applications, terminals and IDE's as administrator
7. Run composer install to install dependencies, set up the .env file, generate an app key, add your mailtrap configuration and configure the database.
8. **Run migrations** in phpMyAdmin to create tables with db:seed.
9. Start the Laravel development server through **php artisan serve** and **npm run dev**
10. Navigate to <http://127.0.0.1:8000/admin/login> and login as admin
[email = 'admin@example.com' , password = 'password']
11. Upload image and video banners and set them as active.
12. Create slugs and categories
13. Navigate to <http://127.0.0.1:8000/register> or [/login](http://127.0.0.1:8000/login) to create user account and you are ready to surf the website without errors.
[email = 'user@example.com' , password = 'password']

4. Getting Started

1. Registration:

- Navigate to the "Register" page and fill in your details to create an account.
- You'll need to verify your email before logging in.

2. Login:

- After registration, log in using your credentials.
- If your credentials are wrong or user account is disabled error message will appear explaining what went wrong.

3. Uploading Media:

- After logging in, you can upload photos and videos by navigating to photos-videos section in navbar and once you are in click on the "Upload" button that appears in the page.
- Select the media file, choose a category, add tags, and provide a description.

5. Features Overview

Media Uploads:

Users can upload photos and videos, with checks for file size, format, and resolution.

Likes and Comments:

Engage with media by liking and commenting on posts. Each media item shows the number of likes and comments.

Categories and Tags:

Media is organized by categories and tags for easy searching and filtering.

Banner Management:

Admins can set banners on media pages to highlight specific photos and videos.

Contact:

users contact page send an email to admin panel with subject, name and description.

User Roles:

Users can manage their own content, while admins oversee the entire platform's content and user activity.

6. User Interface Guide

Home Page:

- User must create an account if he doesn't have one to proceed into system.
- If the user already has an active account he can login and navigate to home page.
- Home page itself displays static integrated images with a brief about EGPICS.

Media Pages:

- Click on any media to view it in full size, alongside its details (uploader, tags, category).
- Engage with the content through likes or by leaving comments.
- Select a media file, fill in details like title, description, category, and tags.
- Upon viewing uploaded media file, if you click on any associated slug it will

Profile Management:

- Update your personal information, including name and email.
- View and manage your uploaded media.

Upload Page:

- Select a media file, fill in details like title, category, and tags, and preview before uploading.

7. Admin Interface Guide

Dashboard:

- Before proceeding and view dashboard with panel content, you must navigate to admin login interface and use pre-existing admin credential to log into system.
- Provides a snapshot of site activity, including total users, total media uploads, active vs inactive users, and media status.

Banner Management:

- Admins can assign banners to the media pages to promote specific photos and videos.
- Only one banner per media type can be active at a time.

Media Management:

- View all media uploaded by users, categorized by ID, title, and status.
- Edit media details, reassign categories, and change status (active, inactive, pending).
- Delete media if necessary.

Slugs and Categories Management:

- View and delete system categories.
- View and delete system slugs.

User Management:

- View and manage user accounts (active/inactive status).
- Delete users or set them as inactive to moderate engagement.

Admin Management:

- Create and delete admin accounts.

8. Troubleshooting

Problem: Unable to log in.

- **Solution:** Ensure that your email and password are correct. If you are sure your credentials are correct contact send an email to admins through contact page as your account status may have been changed by them.

Problem: Upload not working.

- **Solution:** Check that the file format, size, and resolution are within the accepted limits.

Problem: Media is not displaying properly.

- **Solution:** Refresh the page or try clearing your browser cache and cookies. Ensure you have a stable internet connection.

9. FAQ

Q: How do I upload a photo or video?

A: After logging in, go to the “photos” or “videos” page, press on upload button select your file, and provide the necessary details before uploading.

Q: Can I edit my uploaded media?

A: You can edit the title, category, tags, and description of your media but not the uploaded media itself.

Q: How do I report inappropriate content?

A: Contact support through the provided email, or flag content by leaving a detailed comment.
